A400 ELITE Elevator Belt Alignment Monitoring System

A4004V4CAI - A400 Elite control unit

Supply: 12 to 24 DC

Ex II 2D T125°C zone 21 & 22

A4004V46CAI - A400 Elite control unit

Supply: 95 to 250VAC /12 to 24 DC

Ex II 3D T125°C zone 22

APPLICATION

The A400 Elite is a control unit that detects dangerous misalignment of buckets and belt. The A400 Elite monitor works with up to four sensors (BAP2, WDA3 or WDA3HT) depending on the size and type of elevator. It monitors sensors mounted on the elevator that generate a pulse for each metallic bucket or bolt. If the elevator belt becomes misaligned, one of the probes will fail to detect the buckets or bolts, the control unit will cause the alarm relay to energise and, after a delay, the stop relay will de-energise.

FEATURES

- ▶ The A400 Elite monitors the alignment of the belt in one elevator, at both the top and the bottom, or in two separate bucket elevators
- ▶ Alarm and Shut down Relays with time delay options
- ▶ Control unit LEDs indicate the running, alarm and shutdown status of each elevator
- ▶ Easy on-site Installation
- ▶ Full system test feature
- ▶ Voltage free relay contacts
- ▶ IP 66, Nema 12
- ▶ ATEX, IECEx & CSA Approved

OPTIONS

- ▶ RS485 serial communication

Detailed specification, wiring diagrams and installation/operating instructions available upon request.

ATEX zones 21 & 22
